

YOU KNOW THAT MASK DOESNT WORK, RIGHT?

By Francis Steffan

You have been told that you must or should “wear a mask” to protect yourself and others, but is this the truth?

You have heard, we are supposed to “listen to science,” RIGHT?

Well here is some science, the corona virus is between 80 and 160 nano meters¹, that translates to .08 to .16 microns.

An N-95 dust mask is touted as “the best,” only to be used by “first responders,” it filters less than 95% of the .3 micron particles it is rated to stop.² Let's review, Virus=.08-.16, the “best,” not for the peons, mask .3 microns.

One interesting thing I have noticed is that 3M, the inventor and maker of the N95 mask states on their website,³ “DO NOT use for gases and vapors, oil aerosols, asbestos, arsenic, cadmium, lead, 4,4-methylene dianiline (MDA), or abrasive blasting.” The smallest asbestos particle is .7 micron in size, if it cant be used to protect against a .7 micron element how can it protect against a .16 micron virus? Oh bummer drag I just found out, “A breathing gas is a mixture of gaseous chemical elements and compounds used for respiration. Air is the most common, and only natural, breathing gas.” Ah, 3M states on its website, “DO NOT use for gases and vapors.” When we breathe, we don't just exhale carbon dioxide—we also exhale a certain amount of water vapor. How can this be, 3M on its website specifically states, “DO NOT use for gases and vapors.”

Dr. Lisa Brosseau, ScD, CIH, now retired, was a professor at the University of Illinois at Chicago (UIC) School of Public Health where she was director of the Illinois Education and Research Center stated in an interview with Infection Control Today, “...I was looking at cloth masks and surgical masks and respirators from several points of view. First of all, for healthcare and community, but also do they work as source control? Or do they work as personal protective equipment? Or both? And at the end of the day, cloth masks in my opinion don't work in any form. They aren't very good at source control, except for maybe very large particles. And they should not be used in healthcare settings for a number of reasons. So, at the end of the day, the only thing that provides personal protection for the person wearing the mask is a respirator.”⁴

As we all now understand, medical research is arguably the most corrupt field of so-called “science,”⁵ as their existence is dependent on “grants” and grants are for “specific” results paid for by large corporations or gov. Do you not work for them that PAY YOU?

According to Stanford News, N95 masks filter out 95 percent or more of small particulate matter from the air, including the COVID-19 virus, which as a result, makes breathing harder.

Remember the “you work for who pays you” statement, it applies to publications also. Let's review AGAIN, Virus=.08-.16, “best” mask .3, air in only. HOW does a .3 micron mask filter a .16 (max) micron virus, or anything else that small? Science, common sense and reality says it doesn't.

Here's a paid for “expert” now, a pulmonologist, Dr. Raed Dweik, MD, Chairman of Cleveland Clinic's Respiratory Institute. Dr. Dweik confirms that homemade masks, often made of material like cotton, won't do much to protect you from inhaling particles that carry the virus, however, he also claims they do protect wearers from “possibly” spreading the virus to others.⁶ REALLY? HOW? How does the same fabric NOT filter viruses on the way in but magically does going out?

It is shocking, irresponsible and malpractice for a pulmonologist to suggest people restrict their oxygen intake and increase their carbon dioxide using some faux medical device that the pulmonologist himself admits, “won't do much to protect you from...the virus.”

Infectious disease expert Amesh A. Adalja, MD, senior scholar at the Johns Hopkins Center for Health Security in Maryland, says that “someone wearing an N95 mask for a prolonged period of time may have alterations in their blood chemistry that could lead to changes in level of consciousness.”

From a website that is clearly in favor of and promotes “DIY masks” states, “The N95 mask, HEPA filter, and surgical mask still did best, all capturing over 75%. However, the materials consistently captured fewer smaller particles than larger particles. Among the household materials, the HERO coffee filter came up next in the list, capturing 62%. But only four other materials filtered more than 48%: the 40D nylon, CHEMEX coffee filter, the dish towel, and canvas.”⁷

Remember, when they say 75% they mean 75% of .3 micron particles or BIGGER also remember the corona virus is between .08 and .16 microns. The corona virus, at its largest, is 53.3% smaller than .3 microns, so, at the very best it appears a N-95 mask may “capture” 39.9% of the largest corona virus particles. That means you ARE breathing 60% of the available virus wearing the “best,” dust mask, faux medical device available, but YOU aren't supposed to be wearing that anyway, that is only for “the HEROS,” so don't worry you can just make your own or pay WAY too much for a fashion statement mask.

So what percent of .3 micron particles does a bandanna “capture” anyway? Remember we are supposed to listen to science. 2% according to Southern Research Institute, Birmingham, Alabama.⁸

Just for fun I'll remind you, the largest virus particle is .16 microns (smallest .08) which is 53.3% smaller than .3 micron. This drags down the 2% EFFECTIVENESS down to nearly 1%.

Remember the magical bandanna that filters the air you breath out but NOT what you breath in, well

here we go again with Dr. William Schaffner, medical director for the National Foundation for Infectious Diseases saying, “wearing a cloth mask probably won't protect you. But that doesn't mean you should ignore the CDC's recommendation to wear one.” Dr. Schaffner also said “it's easy to get hung up on the materials.”

Like ya know, getting a material that may actually filter something, well no, don't worry about that because he goes on to explain that, "The concept is to get something in front of your face, even if you're tying a bandanna in front of your nose and mouth," he told ABC News.⁹

The concept? I thought we were supposed to be listening to the science but here we have the esteemed National Foundation for Infectious Diseases medical doctor stating that wearing masks is just a concept? What does Merriam-Webster Dictionary define “concept” as? “Something conceived in the mind” and to “conceive” is defined as, “to have as an opinion,” and “to apprehend by imagination.”

If a bandanna “captures” little over 1% of the virus why are we still entertaining this flawed and dangerous “concept?”

It appears, by the “science” that the N-95 dust mask, faux medical device, “captures” approximately 40% of the largest possible size of the corona virus particles being breath in and a bandanna captures less than 2%.

U.S. Surgeon General Jerome Adams made comments in February and March 2020 recommending people not wear masks to help protect against the spread of the COVID-19 coronavirus disease On Feb. 29, 2020, Adams tweeted:

U.S. Surgeon General  @Surgeon_General · Feb 29

Seriously people- STOP BUYING MASKS!

They are NOT effective in preventing general public from catching [#Coronavirus](#), but if healthcare providers can't get them to care for sick patients, it puts them and our communities at risk!

 69.1K

The U.S. Surgeon General also said on March 02 on Fox and Friends, “One of the things [the general public] shouldn't be doing is going out and buying masks ... It has not been proven to be effective in preventing the spread of coronavirus amongst the general public ... Folks who don't know how to wear them properly tend to touch their faces a lot, and actually can increase the spread of coronavirus.”

People will say yeah but he changed his tune, yes he did, and I was talking to a check out girl at a store and I asked her if she knew the masks did nothing and she said yes BUT I need to keep my job, well ole Jerome wants to keep his job too folks.

So, you are wasting your time wearing these masks to protect yourself OR anyone around you, but hey it's your time to waste if you choose and if it doesn't do any good, who cares. Ok, what if wearing a mask not only wasn't doing any good but it had the potential of making your health worse?

All the numbers above are from studies where the mask was fit tight, I did not include any statistics where they deliberately loose fit the masks because the effectiveness dropped far below even mentioning. However, Hartford Healthcare states that, "Only an airtight mask could possibly cause any breathing difficulty. That eliminates cloth masks, the preferred personal protective equipment in public. It actually eliminates N95 respirators, too."¹⁰ Really?

Ah, but, ah, if I am getting air in and out around the actual mask isn't the virus getting around it too? Stanford University research scientist John Xu and mechanical engineer Friedrich "Fritz" Prinz have found that "oxygen intake can be reduced anywhere from 5 to 20 percent which can lead to dizziness and lightheadedness" and "long-term mask wear can even damage lungs."

How's about a real life example most of us have done. Have you ever covered your head with the blanket when sleeping? Have you ever felt you needed to remove the cover so you could breathe? Unless you are one of the few who duct tape your blanket edges to the bed, you still felt you needed air even without an "airtight" seal?

I went to a website that listed the dangers of sleeping with your head covered by a blanket when you sleep, covering your head while sleeping can contribute to brain damage. Evidence shows that 23% of people who sleep with their head under the covers develop dementia, covering your head while sleeping may seem incredibly comfortable, it carries certain risks too. One of these risks is suffocation, particularly if you already have some underlying condition such as asthma, sleep apnea, or cardiac disease.¹¹

At the beginning of this article I made a statement, we have been told to "wear a mask" to protect yourself and others and asked, is this the truth and in my opinion from reading far more science than I have presented here the answer must be NO, it is not the truth, from a medical position.

I suggest you all watch 1984, Wag the Dog and Idiocracy, in that order. You have believed lies and now act the fool. Don't you realize the guy at Walmart with the tablet "counting people" is actually recording COMPLIANCE, they need to know if their propaganda is working, and if you are wearing a mask IT IS.

Your very fashionable, and way overpriced, little fabric mask may “protect” you from losing your job, because your boss is a feckless, pusillanimous tool of the tyrants, and it may also protect your oh so fragile psyche from the scorn of your mislead, gullible, idiot friends but that is about all.

PRACTICE FAITH NOT FEAR
